DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-28, drawn to a network interface controller, classified in class 370, subclass 463.
 - II. Claims 29-36, drawn to a data storage controller, classified in class 370, subclass 381.
 - III. Claims 38-59, drawn to an apparatus and method to allow at least two root complexes to share an endpoint device within a fabric, classified in class 370, subclass 392.

2. The inventions are distinct, each from the other because of the following reasons:

Inventions I, II, and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as processing packets received at the network interface, invention II has a separate utility such as accessing data storage, and invention III has separate utility such as identifying and examining the packets at the endpoint device to determine which of the at least two root complexes that are associated with and processing the packets. See MPEP § 806.05(d).

2. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Art Unit: 2661

3. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
